

Measurement Guide

- Make sure to provide dimensions of all applicable rooms
- Measurements of wall lengths between doorways and corners are helpful
- Window locations are helpful but not necessary
- Overall measurements of adjacent rooms are necessary if the renovation will spill over into them (i.e. painting, flooring, etc.)
- Labels for rooms are helpful
- Scale is certainly not important! Even if the drawing looks a bit off, don't worry about it—the measurements will do the job!

When finished, just snap a picture of your drawing and submit that with your photos!

Pro tip:
If drawing multiple rooms (like shown), try to draw the perimeter first and then add the walls that divide the rooms.
